

Pizza Sales Analysis

Project Overview

The objective of this project was to analyze pizza sales data and identify key business insights related to revenue, customer ordering behavior, product performance, and sales trends.

Tools Used

- SQL
- Excel
- Power BI

Dataset Information

The dataset contains pizza order transactions including:

- Order Date
- Order Time
- Pizza Category
- Pizza Size
- Quantity Sold
- Revenue

Data Cleaning

The dataset was cleaned by:

- Checking for missing values
- Removing duplicates
- Validating data types
- Creating calculated fields for day and hour analysis

SQL Analysis

The following analyses were performed:

- Total Revenue
- Total Orders
- Average Order Value
- Sales by Category
- Sales by Pizza Size

- Top 5 Best-Selling Pizzas
- Bottom 5 Least-Selling Pizzas
- Day-wise Sales Trend
- Hourly Sales Trend

Dashboard Overview

An interactive Power BI dashboard was developed to visualize:

- Revenue KPIs
- Sales Trends
- Product Performance
- Category Analysis
- Size Analysis

Key Insights

1. Friday generated the highest sales and order volume.
2. Peak ordering hours occur between 11 AM–1 PM and 6 PM–9 PM.
3. Large pizzas contribute the highest share of revenue.
4. The Classic category generates the most revenue.
5. Sales are concentrated among a few top-performing pizzas.

Business Recommendations

1. Increase staffing during Friday peak periods.
2. Run promotions during off-peak hours.
3. Focus marketing efforts on Large pizzas.
4. Review low-performing pizza products.
5. Create combo offers using top-selling pizzas.

Conclusion

The analysis shows that customer demand is concentrated on Fridays and meal times. Large pizzas and Classic category products contribute most revenue. Optimizing staffing, promotions, and menu offerings can improve overall business performance.
